

Han Wang

Ph.D. in Autonomous Driving and Generative AI at Berkeley Artificial Intelligence Research

+1 510-409-2998 hanw@berkeley.edu [hanwcal.github.io](https://github.com/hanwcal) hf/hanwcal in/hanwcal

Profile and Objective

Ph.D. candidate at the Berkeley Artificial Intelligence Research group focusing on Autonomous Driving and Multi-agent Reinforcement Learning. Seeking a postdoctoral position starting in 2025 Fall.

Education

University of California, Berkeley	<i>GPA 3.93/4.0</i>	CA, United States
Ph.D. in Transportation Engineering	<i>Advisor: Maria Laura Delle Monache</i>	08/2021 – 05/2025(Exp.)
M.S. in Electrical Engineering and Computer Science	<i>Advisor: Alexandre Bayen</i>	08/2023 – 05/2025(Exp.)
M.Eng. in Transportation Engineering	<i>Advisor: Alexander Skabardonis</i>	08/2020 – 05/2021
Relevant Courses: Deep Reinforcement Learning / Responsible GenAI and Decentralized Intelligence / Advanced Control System / Reproducible and Collaborative Statistical Data Science / Computer Vision / Immersive Computing and Virtual Reality / Foundations of Computer Graphics / Intelligent Transportation Systems / Data Driven Control Methods for Civil Systems / Highway Traffic Operations / Operation of Transportation Facilities / Systems Analysis in Transportation / Public Transportation Systems / Traffic Safety and Injury Control		
Southeast University	<i>GPA 85.75/100</i>	Nanjing, China
M.Eng. in Transportation Engineering	<i>Advisor: Jian Zhang, Bin Ran</i>	09/2017 – 05/2020
Southwest Jiaotong University	<i>GPA 80.27/100</i>	Chengdu, China
B.S. in Transportation Engineering		09/2013 – 06/2017

Research Experience

- Congestion Impacts Reduction via CAV-in-the-loop Lagrangian Energy Smoothing (CIRCLES)** **03/2022-12/2024**
World's largest open-track fieldtest, sending 100 auto-vehicle(AV)s to I-24 during the morning peak to improve traffic. Funded by Toyota, Nissan, and General Motors. Supported by Tennessee Department of Transportation
 - **Role:** Led the centralized speed planner to publish the optimized speed for all 100 AVs in real-time during the experiment.
 - **Tools:** RL Speed Planner: PyTorch, Ray, Gym | Backend: MySQL, Python | API: PHP
 - **Outcome:** From the field test data, we observed an 8% improvement overall, with 7% and 10% improvements upstream and downstream, respectively, and a 52% improvement during congestion formation at the bottleneck.
- Collision Indeterminacy Prediction via Stochastic Trajectory Generation** **06/2023-06/2024**
Predicting the motion of AV with the pre-trained image generative model. Funded by Berkeley Deep Drive and Allstate
 - **Role:** Lead the occupancy image dataset collecting, generative decoder pre-training, end-to-end training with perception encoder, the building of the simulation platform, and the design & training of the AV controller in the simulator.
 - **Tools:** ML Model Design & Training: PyTorch, Ray | Simulation: SUMO | Dataset: Argoverse
 - **Outcome:** Developed a probabilistic occupancy risk assessment (PORA) metric, validated through a scenario-generation-based microsimulation platform, demonstrated to be effective in predicting 87% of the conflicts that could not be predicted by TTC-2.
- Creating an Inclusive Bicycle Level of Service: Virtual Bicycle Simulator study** **01/2021-08/2023**
Gather user feedback on biking environments with VR simulator survey. Funded by California Department of Transportation
 - **Role:** Built the VR biking simulator, including hardware & software integration. Rebuilt the California streets in 3D scenarios.
 - **Tools:** Simulator Development: Unity, C#, SteamVR | Modeling: Blender
 - **Outcome:** The feedback from the survey proved the VR simulator provided a more realistic and engaging experience for participants, which enhanced their ability to make informed decisions about their route preferences.
- Opportunities and Challenges for Runtime Behavior Generation in Games and Simulations** **09/2023-06/2024**
Runtime behavior generation using large language models in game/simulation development. Personal Project
 - **Role:** Developed the runtime code compile module. Implemented the semantic search and prompt engineering of the agent. Develop the element tree system of test scenarios. Conducted generalization tests in various scenarios.
 - **Tools:** System Development: Unity, C# | LLM: OpenAI API
 - **Outcome:** The pressure test demonstrated the system in various game scenarios, achieving an 85% success rate. Thematic analysis of developer feedback indicates the improved dynamic game experience by integrating real-time behavior generation.

V2X-based Driving Perception Assistance System

09/2023-12/2024

Integration of foundation models and AR to enhance driving assistance systems via real-time visual aids Personal Project

• **Role:** Designed and implemented a system integrating multimodal data (Lidar, cameras, maps, traffic updates) for real-time driving assistance. Developed AR visual aids for 3D object tracking and scene reconstruction. Utilized specialized LLMs for script generation and natural language interaction.

• **Tools:** System Development: Unity, C#, OpenCV | LLM: Ollama, LiteLLM

• **Outcome:** Achieved accurate 3D object tracking and reconstruction, enhancing driver situational awareness and safety through real-time AR visualizations. Refined functionality through human-in-loop interactions and driver feedback. Integrated foundation models for natural language command interpretation and script generation, improving adaptability and usability.

Vision-based Browser Automation using GenAI

01/2024-12/2024

Automating browser workflows using multimodal LLM agents.

Personal Project

• **Role:** Finetuned open-source LLMs with RAG for browser operation subtasks. Developed vision + HTML webpage scraper. Defined and implemented multi-agent workflow. Develop the browser operation API kit for LLM. Developed the Chrome extension for human-in-loop expert data collecting. Created the open dataset on HuggingFace.

• **Tools:** Finetune: Unsloth | Agent: Ollama, LangChain, LiteLLM

• **Outcome:** Enhanced automation stability and adaptability to website layout changes, enabling complex workflow automation across multiple sites. Integrated real-time debugging and visualization of automation steps, facilitating efficient troubleshooting.

Crowdsourcing Perceived Hazardous Pedestrian Locations

09/2020-05/2021

SafeTport: An IOS App allowing users to report and view traffic hazards and crashes.

Funded by SafeTREC

• **Role:** Developed the front-end and back-end of the system independently.

• **Tools:** IOS APP: Swift, Google Map Platform | Backend: MySQL, AWS, Restful API

• **Outcome:** Created a functional application, identified marketing strategy in user engagement and data collection.

Research on Multi-junction Energy-saving Access Control of Intelligent Electric Vehicles

07/2017-12/2020

Developed control models and simulations for energy-saving access control in intelligent electric vehicles. Funded by SEU

• **Role:** Established a multi-agent control model using improved MADDPG algorithm for multi-intersections urban arterial in a connected environment. Designed traffic and communication network simulations using SUMO, OMNET++.

• **Tools:** Controller: TensorFlow | Simulation: SUMO, OMNET++

Resilience Research for Extremely Surging Traffic of Huning (Shanghai-Nanjing) Highway

03/2017-12/2019

Analyze and improve the resilience of the Huning Highway system under extremely large traffic flow

Funded by Joint Research Institute on Internet of Mobility: Southeast University and University of Wisconsin

• **Role:** Led the establishment of the SUMO micro-simulation scenario for the entire Huning Highway. Designed the ramp control algorithm based on deep reinforcement learning.

• **Tools:** Simulation: SUMO | Ramp Controller: keras

Course Design of the Traffic Analysis I Driven by Big Data

01/2019-12/2019

Enhanced traditional traffic analysis course content with data mining skills.

Funded by Didi Chuxing Technology Co.

• **Role:** Added data mining related skills to the traditional traffic analysis course content. Designed course paper requirements integrating data of the GAIA Initiative from Didi.

Skills

Programming Languages:

Python, C#

Backends:

MySQL, AWS

Frameworks and Libraries:

PyTorch, Ray, Ollama, LiteLLM, Unsloth, OpenCV

Simulation and Modeling:

Unity, SteamVR, Blender, SUMO

Thesis

Thesis Title: *Scalable Distributed Control for Large-Scale Multi-Agent Systems*

December 2024

Degree: Ph.D. in Transportation Engineering

University of California, Berkeley, CA

Objective: To develop and validate a scalable distributed control framework that employs hierarchical and distributed control to optimize operation efficiency in large-scale multi-agent systems. The application goal is to integrate real-time data and machine learning algorithms to control the speed limits system, enhancing traffic efficiency and reducing fuel consumption.

Thesis Title: *Multi-Agent Reinforcement Learning Method for Arterial Traffic Signal Control*

May 2020

Degree: M.Eng. in Transportation Engineering

Southeast University, Nanjing, China

Objective: To address the complexity of coordinating multi-intersection arterial traffic signal control systems by implementing a reinforcement learning approach that effectively manages the delayed reward dynamics inherent in such environments.

Honors

- Best Paper Award: 37th Annual ACM Symposium on User Interface Software and Technology (ACM UIST 2024)
- IEEE ITSC 2024 Institutional Lead Award as the CIRCLES Consortium
- 2nd Prize Scholarship of Southeast University - 3 times (2017-2019)
- 3rd Prize of the National Cup Graduate Mathematical Contest in Modeling (2017)
- 3rd Prize of the Undergraduate Transportation Science and Technology Competition, SWJTU (2016)
- 1st Prize of the National Higher Education Association Cup Mathematical Contest in Modeling, Sichuan Province (2015)
- 3rd Prize Scholarship of Southwest Jiaotong University (2014)
